Molecular Configuration in Sodium Thymonucleate

SODIUM thymonucleate fibres give two distinct types of X-ray diagram. The first corresponds to a crystalline form, structure *A*, obtained at about 75 per cent relative humidity; a study of this is described in detail elsewhere¹. At higher humidities a different structure, structure *B*, showing a lower degree of order, appears and persists over a wide range of ambient humidity. The change from *A* to *B* is reversible. The water content of structure *B* fibres which undergo this reversible change may vary from 40-50 per cent to several hundred per cent of the dry weight. Moreover, some fibres never show structure *A*, and in these structure *B* can be obtained with an even lower water content.

Square, London, W.C.1.

Similarities between the capsid protein of SIRV2 and small, acid-soluble spore proteins, SASPs :

- The proteins are unstructured in solution, but become completely α -helical upon binding dsDNA; binding to DNA induces protein dimerization;
- The binding of proteins to DNA is saturable, and saturation occurs at an Protein/DNA weight ratio of 3:1;
- The binding of SASPs to DNA induces a transition from B-DNA to A-DNA.

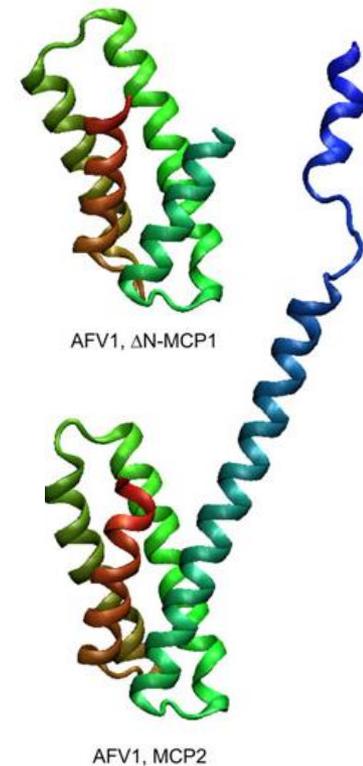

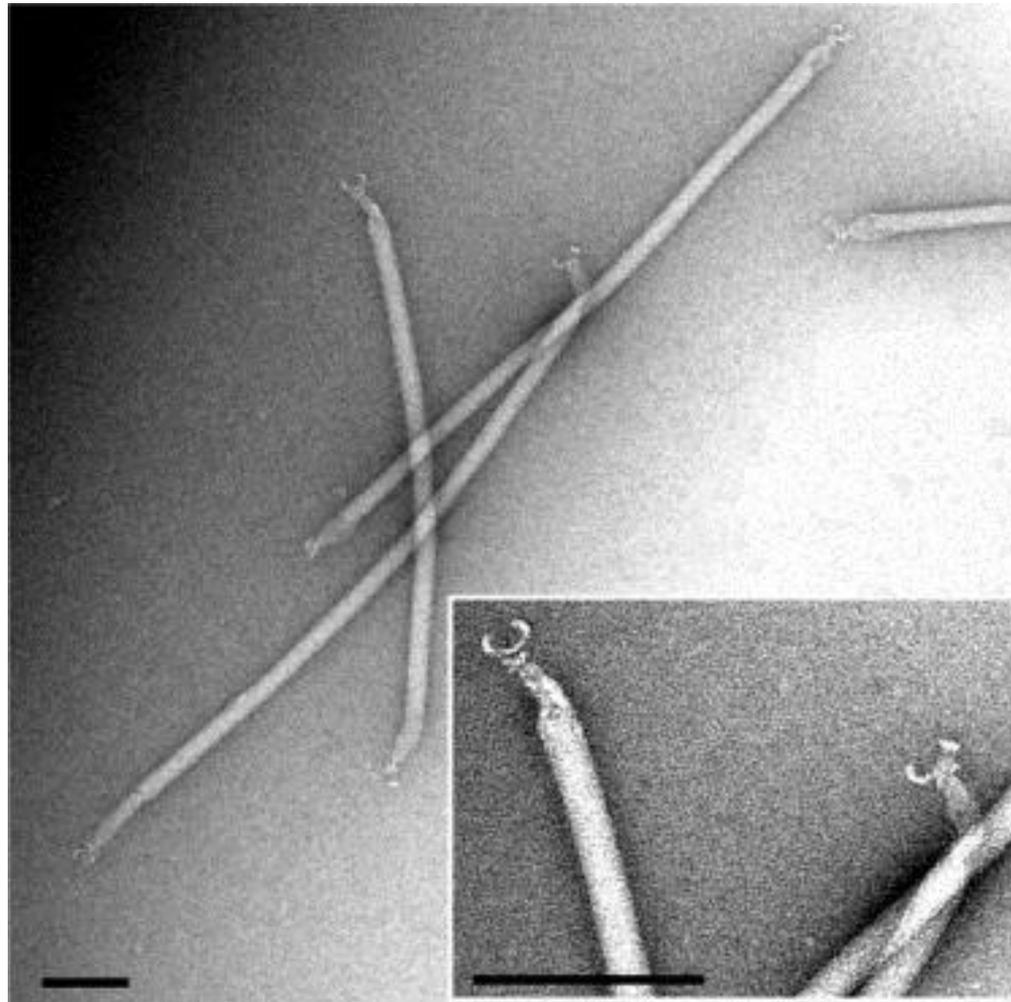

Bacterial spores and archaeal virus converged on the same solution for genome protection in hostile environments

Similarities between the capsid protein of SIRV2 and small, acid-soluble spore proteins, SASPs :

- The proteins are unstructured in solution, but become completely α -helical upon binding dsDNA; binding to DNA induces protein dimerization;
- The binding of proteins to DNA is saturable, and saturation occurs at an Protein/DNA weight ratio of 3:1;
- The binding of SASPs to DNA induces a transition from B-DNA to A-DNA.

Adopting A-form DNA might be a widespread biological mechanism to withstand adverse conditions

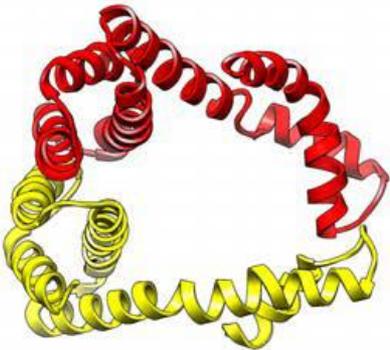

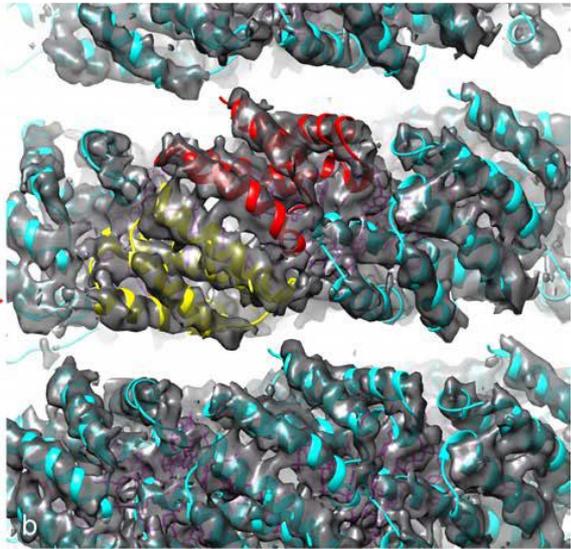

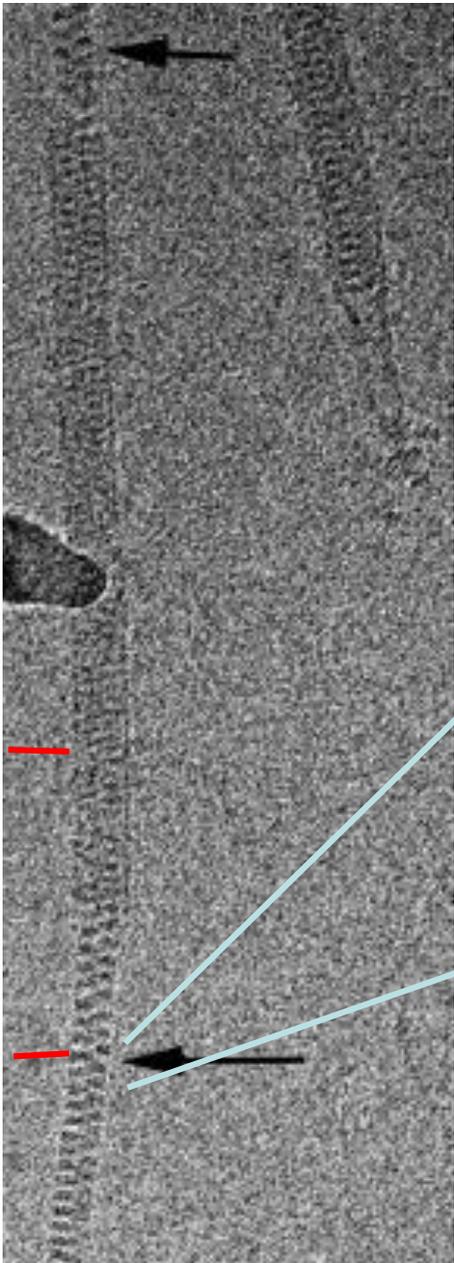

Lipothrixviridae: *Acidianus filamentous virus 1*, AFV1

linear dsDNA 35.450 bp

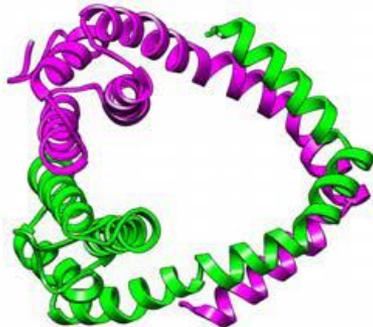

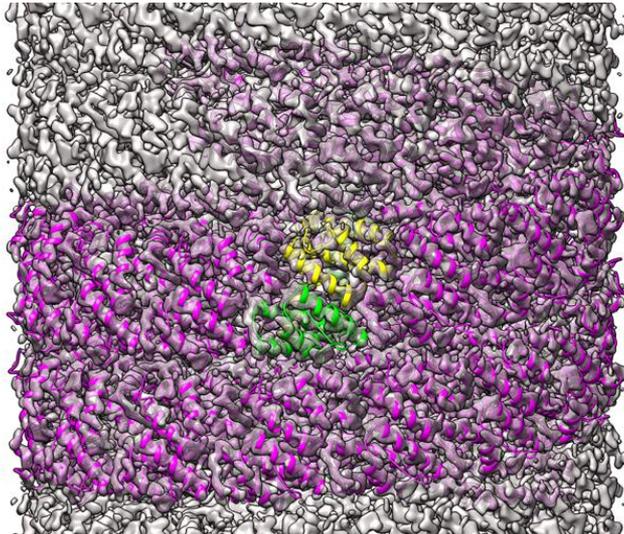

Lipothrixviridae: *Acidianus* filamentous virus 1, AFV1

Lipothrixvirus AFV1

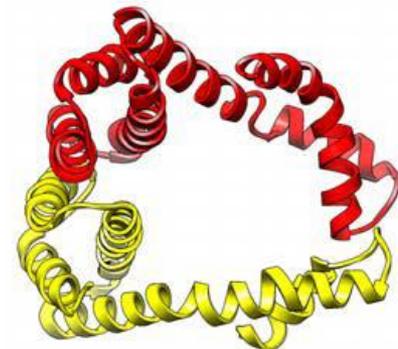

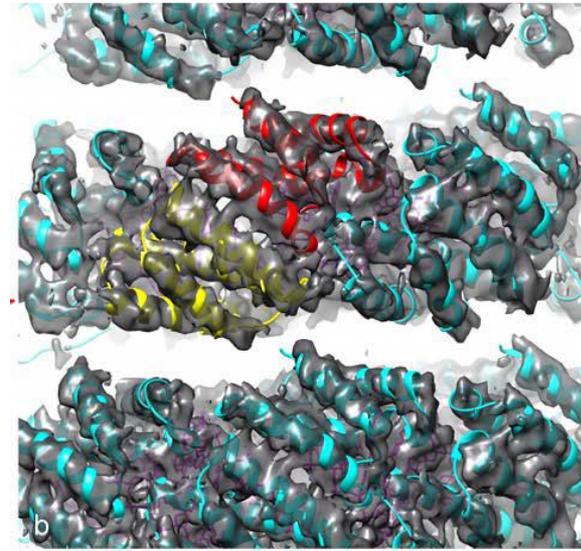

Kasson, DiMaio, Yu, Lucas, Krupovic, Schouten, Prangishvili, Egelman *Elife* 2017

Rudivirus SIRV2

DiMaio, Yu, Rensen, Krupovic,
